FUNCTIONAL SPECIFICATION DOCUMENT

Comfort Aircon

Prepared For

Comfort Aircon

Carrier AC Dealer & Air Conditioning Services

Pondicherry, Tamil Nadu

Version 1.0 | Date: 07/10/2026 | Classification: Confidential

1. Document Control

Explanation

This section establishes document control for the Comfort Aircon Website and Admin Panel Functional Specification.
It identifies the document title, project, client, preparing organisation, version, effective date and confidentiality classification so all stakeholders work from the same controlled baseline.
Related documents are referenced to maintain traceability with the signed Project Scope and Commercial Quotation.
The technology stack is recorded to clarify implementation ownership between the public website and admin backend.
This control information is required for professional delivery governance, review and later change management.

Document Title	Functional Specification Document
Project	**Comfort Aircon** Website & Admin Panel
Client	**Comfort Aircon** (**Carrier AC** Dealer & Air Conditioning Services), Pondicherry
Prepared By	Syscorp Technology Private Limited
Document Type	Functional Specification Document
Version	1.0
Effective Date	07/10/2026
Classification	Confidential — Client & Internal Use
Related Documents	Project Scope Document; Commercial Quotation
Technology	Frontend: **Next.js** | Backend / Admin: **Laravel**

1.1 Revision History

Explanation

The revision history provides an auditable record of how this specification has evolved.
Each entry captures version, date, author and a concise description of the change so updates remain transparent.
Version 1.0 represents the initial signed baseline covering pages, sections and fields agreed for delivery.
Any future amendment must be recorded here before it is treated as part of the approved baseline.
This practice follows standard IT document-control discipline used in project delivery and UAT readiness.

Version	Date	Author	Description
1.0	07/10/2026	Syscorp Technology	Initial baseline of pages, sections and fields for signed delivery

1.2 Approval Record

Explanation

The approval record defines formal ownership and acceptance of this specification.
Prepared By identifies Syscorp Technology Private Limited as the authoring organisation.
Reviewed By assigns internal governance responsibility to the Syscorp Project Manager or Director.
Approved By confirms Client acceptance by Comfort Aircon.
The Date field records when each role completed its review or approval, enabling clear accountability without ambiguity.

Role	Name / Organisation	Date
Prepared By	Syscorp Technology Private Limited	
Reviewed By	Project Manager / Director — Syscorp	
Approved By (Client)	**Comfort Aircon**	

How to read this document: Every page, section and form field is written in plain English. If something is listed under **Included**, it is part of delivery. If something is listed under **Not Included**, it is outside the signed project unless a Change Request is approved.

2. Purpose & Audience

This document defines the **agreed delivery baseline** for the **Comfort Aircon** website and admin panel after the project is signed. It tells both Syscorp and the Client, in clear words, **which pages exist**, **what each page contains**, and **which exact fields** are included.

- Use it during development and testing as the checklist of what must be built.
- Use it when the Client asks for something extra — check whether it is already listed here.
- Anything not listed here needs a written Change Request before work starts.

Explanation

This section explains the intended audience and the business purpose of the document for each reader group.
The Client uses it to confirm and freeze what is included in the signed delivery.
Syscorp leadership uses it for scope governance and commercial protection when additional requests arise.
Delivery, development and quality teams use it as the functional checklist for build and acceptance testing.
Aligning all parties to one audience model reduces misinterpretation during implementation and handover.

Who reads this	Why
Client	Confirm and freeze what is included
Syscorp Director / Project Manager	Protect scope and commercial agreement
Delivery / Development / QA team	Build and test against one clear baseline

3. System Overview

Comfort Aircon is a **Carrier AC** dealer and AC service business in Pondicherry. The website shows company information, services, products and gallery photos, and lets customers send enquiries. Staff manage products, gallery, enquiries, contact details and users from an Admin Panel. This is **not** an online shop.

Explanation

The system overview summarises the business solution being delivered for Comfort Aircon.
The product is a business enquiry website supported by an Admin Panel, not an e-commerce storefront.
It defines the public page set, admin access model, technology platform and primary customer conversion actions.
Online purchase and payment are explicitly excluded to keep commercial boundaries clear.
This overview provides the context against which all later page and field requirements should be interpreted.

Item	Details
Solution type	Business enquiry website + Admin Panel
Public pages	Home, About Us, Services, Products, Gallery, Contact Us
Admin pages	Admin Login and Admin Panel
Technology	**Next.js** (website) · **Laravel** (backend / admin)
Customer actions	Enquiry form · **WhatsApp** · Call (on mobile phone, opens the dial screen to call the business)
Online purchase / payment	Not included

3.1 Who uses the system

Explanation

This section defines the user roles that interact with the solution and their responsibilities.
Public visitors browse the website and may submit enquiries, while customers initiate contact through the form, WhatsApp, or by tapping Call on a mobile phone to open the dial screen.
Super Admin holds full administrative authority, including user management.
Admin and Content Manager operate with controlled module access appropriate to their duties.
Clear role definition supports access control design, testing and operational handover.

User	What they do
Public Visitor	Browses the website pages; may submit an enquiry
Customer	Submits enquiry form, opens WhatsApp chat, or taps Call on mobile (opens the phone dial screen with the business number)
Super Admin	Full admin access, including user management
Admin	Manages Products, Gallery, Enquiries and Contact
Content Manager	Manages Products, Gallery and Contact

4. What Is Included and What Is Not Included

This section is the main protection boundary. **Included** means it is part of the signed delivery. **Not Included** means it is outside the signed delivery and needs a Change Request.

4.1 Included in this project

Explanation

This section defines the functional items included in the signed project baseline.
Each item represents an agreed delivery obligation covering public pages, shared components, enquiry handling and admin capabilities.
The list also includes basic SEO, responsive public layout and the rule that Home, About and Services content is fixed in the build.
These inclusions form the positive scope used for planning, development and UAT.
Work is considered in-scope only when it maps to an item listed here or detailed in later page and field sections.

#	Included item	Meaning in simple words
1	Six public website pages	Home, About Us, Services, Products, Gallery and Contact Us
2	Shared header, footer, social icons and floating WhatsApp	Same top/bottom design on all public pages
3	One enquiry form with 7 fields	Name, Mobile, Email, Service Required, Product Interested In, Location, Message
4	Enquiry email + admin follow-up statuses	Enquiry is saved and emailed; staff update status while following up
5	Admin Login	Staff sign-in, password change/reset, logout and session timeout
6	Admin Panel modules	Roles & Permissions, Products, Gallery, Enquiries, Contact
7	Basic SEO and mobile-friendly public pages	Clean URLs, titles, meta text, headings, alt text, sitemap, robots, Open Graph, Pondicherry local SEO
8	Fixed Home / About / Services content	These page texts are designed in the build; not edited from admin

4.2 Not included in this project

Explanation

This section defines exclusions that protect both parties from scope ambiguity after sign-off.
Online commerce, additional public pages, extra form fields and unlisted admin modules are outside the current baseline.
Home-page gallery preview and third-party messaging or CRM integrations are also excluded.
Any request matching these exclusions requires a written Change Request before work begins.
Maintaining an explicit exclusion list is standard practice in IT project governance and commercial control.

#	Not included item	Meaning in simple words
1	Online payment / cart / checkout	Customers cannot buy or pay online
2	Extra public pages	No Blog, FAQ, Careers or other pages beyond the six listed
3	Extra enquiry form fields	Only the 7 fields listed in Section 6 are included
4	Extra admin modules	Only Roles, Products, Gallery, Enquiries and Contact are included
5	Admin editing of Home / About / Services text	Those pages are fixed in the build
6	Gallery preview on Home page	Gallery photos appear only on the Gallery page
7	SMS / WhatsApp Business API / CRM integrations	Not part of this delivery

If a later request is not clearly written in the Included list (or in the page/field sections below), it is treated as Not Included until a Change Request is approved in writing.

5. Shared Parts on All Public Pages

These parts are built once and shown on every public page (Home, About Us, Services, Products, Gallery, Contact Us).

5.1 Website Header

Meaning: The top bar of every public page — contact details, logo, menu and enquiry buttons.

Explanation

The website header is a shared public component displayed consistently across all six public pages.
Its purpose is to provide immediate brand identification, navigation and primary enquiry actions.
Visitors can access contact details, move between pages, and start an enquiry through Enquire Now, WhatsApp or Call.
On a mobile phone, when the customer taps Call, the phone dial screen opens with the business number so they can call immediately.
Because the header is global, its contents are fixed for the public site and reused rather than redesigned page by page.

#	Part	What it includes
1	Top bar	Business phone, email, and social icons (Facebook, Instagram, Twitter, YouTube)
2	Logo	**Comfort Aircon** logo; click opens Home
3	Main menu	Only these links: Home, About Us, Services, Products, Gallery, Contact Us (current page highlighted)
4	Enquire Now	Opens the shared enquiry form (7 fields in Section 6)
5	WhatsApp	Opens WhatsApp chat with the business WhatsApp number
6	Call	Works on mobile phone: when the customer taps Call, the phone dial screen opens with the business number ready to call
7	Mobile menu	Menu becomes hamburger; Enquire Now and WhatsApp stay visible

5.2 Website Footer

Meaning: The bottom area of every public page — company info, links and contact details.

Explanation

The website footer is a shared closing component that reinforces company identity, navigation and contact credibility.
It presents a short company profile, quick page links, the service catalogue and full contact details.
Service-area messaging supports local relevance for Pondicherry and nearby locations.
Contact values displayed in the footer are driven from Admin Contact Management to keep public information consistent.
The footer ensures essential business information remains available at the end of every public page journey.

#	Part	What it includes
1	About column	Logo, short company description, **Carrier AC** dealer line, social icons
2	Quick links	Home, About Us, Services, Products, Gallery, Contact Us
3	Our services	AC Installation, Repair, Service & Maintenance, Gas Filling, Cleaning & Troubleshooting, Replacement, Annual Maintenance, Commercial AC Services
4	Contact column	Address, phone, WhatsApp, email, working hours, Google Maps link
5	Service areas	**Pondicherry**, **Villupuram**, **Cuddalore** and nearby

5.3 Floating WhatsApp Button

Meaning: A WhatsApp shortcut that stays visible while the visitor scrolls.

Explanation

The floating WhatsApp control provides a persistent, low-friction channel for customer contact.
It remains visible while visitors browse any public page, reducing drop-off when they are ready to enquire.
Selecting the control opens a WhatsApp conversation with the business number maintained in Contact Management.
A pre-filled message standardises the first customer interaction and speeds response handling.
This feature supports conversion without introducing additional chat platforms or integrations.

#	Part	What it includes
1	Button	Round WhatsApp icon fixed at bottom-right on desktop and mobile
2	Action	Opens WhatsApp chat with the business WhatsApp number from Contact Management
3	Ready message	Hi, I want to enquire about your AC products / services.

6. Enquiry Form — Exact Fields

Meaning: There is only one enquiry form in the whole website. It is used in three places: Enquire Now button, product Enquire button, and Contact Us page. The table below is the complete field list.

Explanation

The enquiry form is the primary lead-capture feature of the website and is shared across all enquiry entry points.
Its purpose is to collect only the information required for sales and service follow-up.
The form contains seven fields covering identity, contact, service interest, product interest, location and free-text requirements.
Mandatory and optional rules are defined so validation and staff follow-up remain consistent.
No additional enquiry fields are included in baseline delivery beyond this approved field set.

#	Field name (on the form)	Field type	Required?	Meaning / rules
1	Name	Text	Yes	Customer full name (letters and spaces)
2	Mobile Number	Phone	Yes	10-digit Indian mobile — for call / WhatsApp follow-up
3	Email	Email	No	Optional reply email
4	Service Required	Dropdown	Yes	AC Installation; Repair; Service & Maintenance; Gas Filling; Cleaning & Troubleshooting; Replacement; Annual Maintenance; Commercial AC Services; Other
5	Product Interested In	Dropdown	No	Published products; auto-filled when Enquire is clicked on a product
6	Location	Dropdown	Yes	**Pondicherry**; **Villupuram**; **Cuddalore**; Other (+ text box)
7	Message	Text area	No	Extra details — maximum 500 characters

6.1 What happens after submit

Explanation

This section describes the end-to-end enquiry process after a visitor submits the form.
The system validates required inputs, stores the enquiry for staff action and notifies the business by email.
Each enquiry enters Admin Enquiry Management with status New so the team can track follow-up.
Staff may progress the enquiry through agreed statuses until closure.
The process ensures leads are captured, visible and actionable without depending on informal channels alone.

#	Step	Meaning
1	Check fields	Required fields must be filled correctly before the form is accepted
2	Save enquiry	Enquiry appears in Admin → Enquiry Management with status New
3	Send email	Business email receives all submitted field values
4	Staff follow-up	Staff can set status to New, Contacted, In Progress, Completed or Closed

Extra form fields (for example file upload, preferred time, GST number) are **Not Included** unless approved as a Change Request.

7. Public Pages — What Each Page Includes

7.1 Home Page

Website address: `/` | First page visitors see

Meaning: Introduces the company, shows services and products, and leads the visitor to enquire.

Explanation

The Home page is the primary landing experience and first brand impression for website visitors.
Its purpose is to introduce Comfort Aircon, communicate Carrier AC dealership strengths and guide users toward enquiry.
The page presents services and selected products, explains why customers should choose the business, and highlights service areas.
Call-to-action controls for WhatsApp and Call support immediate contact.
On a mobile phone, tapping Call opens the dial screen with the business number.

#	Section on the page	What is included
1	Hero / Banner	Company introduction, **Carrier AC** dealer highlight, Enquire Now and **WhatsApp**
2	Services Overview	Service cards linking to the Services page
3	Featured Products	Selected products with Enquire button
4	Why Choose Us	Reasons to choose **Comfort Aircon**
5	Service Areas	**Pondicherry**, **Villupuram**, **Cuddalore** and nearby
6	Enquiry buttons	**WhatsApp** and Call (on mobile phone, Call opens the dial screen to call the business)

Home does **not** show a gallery preview. Photos are only on the Gallery page.

7.2 About Us Page

Website address: `/about`

Meaning: Company story and trust information.

Explanation

The About Us page establishes trust by explaining the organisation, experience and values of Comfort Aircon.
It communicates dealership identity, operational background and the reasons customers should engage the business.
Content on this page is fixed in the build and is not managed through a general CMS module.
This approach keeps messaging stable after content freeze while still allowing product, gallery and contact updates from admin.
The page supports credibility before visitors proceed to services, products or enquiry.

#	Section on the page	What is included
1	Company Introduction	Who **Comfort Aircon** is and **Carrier AC** dealership
2	Experience	Years in business / projects completed
3	Mission & Values	Mission statement and core values
4	Why Customers Choose Us	Trust points

7.3 Services Page

Website address: `/services`

Meaning: Full list of AC services. Each service card has a short description and Enquire button. Page also has Enquire Now, WhatsApp and Call. On a mobile phone, tapping Call opens the dial screen with the business number.

Explanation

The Services page presents the complete catalogue of air-conditioning services offered by Comfort Aircon.
Each listed service is shown as a structured card with a short description and an enquiry action.
The approved baseline includes eight service types covering installation, repair, maintenance and related commercial needs.
Enquiry Now, WhatsApp and Call options are available so visitors can convert directly from this page.
On a mobile phone, tapping Call opens the dial screen with the business number.

#	Service name included
1	AC Installation
2	Repair
3	Service & Maintenance
4	Gas Filling
5	Cleaning & Troubleshooting
6	Replacement

7. Public Pages (continued)

7.4 Products Page

Website address: `/products` | Information and enquiry only — no online purchase

Meaning: Product catalogue for viewing and enquiry. Customers cannot buy online.

Explanation

The Products page is an information and enquiry catalogue, not a purchase or checkout experience.
Its purpose is to help visitors review product details and raise interest through the shared enquiry form.
Product records are sourced from Admin Product Management and shown only when published.
Enquiry from a product card opens the form with the selected product already populated.
Online buying, cart and payment capabilities are intentionally excluded from this page.

#	Section on the page	What is included
1	Product Grid	Published products from Admin → Product Management
2	Enquire from product	Opens the shared enquiry form with Product Interested In already selected

Exact fields shown on each product card

Explanation

Each product card defines the exact product information presented to public visitors.
The card displays image, name, model, specifications, features and an Enquire action only.
This structure ensures product communication remains consistent across the catalogue.
Commercial attributes such as price, stock, cart or reviews are not part of the approved card design.
Admin product fields are aligned to these card elements so published content matches the public presentation.

#	Field on the card	Meaning
1	Image	Product photo
2	Name	Product name
3	Model	Product model
4	Specifications	Technical specifications
5	Features	Key features
6	Enquire button	Opens the shared enquiry form

Not on Products page: price cart, buy button, checkout, payment, stock count, reviews, wishlist.

7.5 Gallery Page

Website address: `/gallery`

Meaning: Photo portfolio of work. Images are managed from Admin → Gallery Management.

Explanation

The Gallery page showcases completed work and related visuals to support trust and sales conversations.
Images are organised under approved categories and managed through Admin Gallery Management.
Only published images are displayed on the public page, giving staff control over what customers see.
The gallery is limited to image presentation under the agreed categories and does not include video tools or customer upload workflows.
This keeps portfolio management simple, controlled and aligned to the signed scope.

#	Item	What is included
1	Image grid	Published gallery photos
2	Category — Installation photos	Supported image category
3	Category — Completed projects	Supported image category
4	Category — Service work	Supported image category
5	Category — Product images	Supported image category

7.6 Contact Us Page

Website address: `/contact`

Meaning: Contact details plus the full enquiry form.

Explanation

The Contact Us page consolidates business reachability and lead capture in one location.
hours and map details before submitting an enquiry.
ebsite is presented here for consistency.
act Management.
nd formally submit requirements without navigating elsewhere.

8. Admin Login & Admin Panel

8.1 Admin Login Page

Website address: `/admin-login` | Used by staff only

Meaning: Staff sign-in screen before opening the Admin Panel.

Explanation

Admin Login provides secure staff authentication before any administrative function is accessed.
Users sign in with Email/Username and Password and are directed to the Admin Panel on success.
Password change and reset capabilities support account hygiene and recovery.
Session controls such as logout, timeout and redirect protect unauthorised access to admin functions.
This screen is the controlled entry point for all operational users of the system.

#	Field / feature	Type	Required?	Meaning
1	Email / Username	Text	Yes	Staff login ID
2	Password	Password	Yes	Staff login password
3	Login button	Button	—	Signs in and opens Admin Panel
4	Change password	Feature	—	Logged-in user can change password
5	Forgot / reset password	Feature	—	Reset password by email link
6	Session security	Feature	—	Logout, timeout, redirect to login if not signed in

8.2 Admin Panel modules

Website address: `/admin` | Each module shows only if the user's role has permission

Meaning: These are the only admin modules included in the signed project.

Explanation

The Admin Panel groups the operational modules required to run the website after go-live.
Staff can manage users and permissions, products, gallery images, enquiries and contact details from one secured area.
Module visibility is permission-based so each role sees only authorised functions.
Layout elements such as sidebar navigation and logout support efficient day-to-day use.
Modules outside this approved set are not part of baseline delivery.

#	Module name	What staff can do
1	Layout	Sidebar menu, user name, Logout (returns to Admin Login)
2	Roles & Permissions	Create and manage users; assign permissions; activate/deactivate; roles Super Admin / Admin / Content Manager
3	Product Management	Add, edit, delete products; images; specifications; publish or unpublish
4	Gallery Management	Upload, edit caption, delete images; categories; publish or unpublish
5	Enquiry Management	View, search, filter; update status; delete
6	Contact Management	Phone, WhatsApp, email, address, working hours, social media links

8.3 Role access (who can open which module)

Explanation

The role matrix defines access rights across Super Admin, Admin and Content Manager.
Super Admin retains full control, including user administration.
Admin focuses on products, gallery, enquiries and contact operations.
Content Manager is limited to products, gallery and contact, without enquiry or user administration access.
This matrix is the authority model used for permission assignment, testing and operational handover.

Role	Users	Products	Gallery	Enquiries	Contact
Super Admin	Yes	Yes	Yes	Yes	Yes
Admin	No	Yes	Yes	Yes	Yes
Content Manager	No	Yes	Yes	No	Yes

9. Exact Admin Form Fields

These tables list the exact fields inside each admin module. If a field is not listed here, it is not included.

9.1 Roles & Permissions — user fields

Meaning: Fields used when creating or editing an admin user.

Explanation

User management fields define how staff accounts are created and controlled in the Admin Panel.
Each user record captures identity, login credentials, assigned role, module permissions and active status.
Role and permission settings determine which admin modules the user can access.
Deactivating a user prevents further login without deleting historical accountability.
These fields support secure multi-user operation under the agreed role model.

#	Field name	Type	Required?	Meaning
1	Full Name	Text	Yes	Staff name shown in admin
2	Email / Username	Email / Text	Yes	Login ID
3	Password	Password	Yes (on create)	Login password
4	Role	Dropdown	Yes	Super Admin, Admin, or Content Manager
5	Module permissions	Checkboxes	Yes	Products, Gallery, Enquiries, Contact, Users
6	Status	Activate / Deactivate	Yes	Active users can log in; inactive cannot

9.2 Product Management — fields

Meaning: Fields used when adding or editing a product. These match the public product card.

Explanation

Product Management fields define the product data that staff maintain for public catalogue display.
Required attributes cover product name, model, specifications, features and images, plus publish control.
Published products appear on the Products page; unpublished products remain hidden from visitors.
The field set is intentionally limited to enquiry-support information and excludes commerce attributes.
This keeps product administration aligned with the information-only catalogue model.

#	Field name	Type	Required?	Meaning
1	Product Name	Text	Yes	Shown on the public product card
2	Model	Text	Yes	Shown on the public product card
3	Specifications	Text area	Yes	Shown on the public product card
4	Features	Text area	Yes	Shown on the public product card
5	Image(s)	File upload	Yes	Shown on the public product card
6	Publish / Unpublish	Status	Yes	Published = visible on website

9.3 Gallery Management — fields

Meaning: Fields used when adding or editing a gallery image.

Explanation

Gallery Management provides controlled administration of portfolio images shown on the public Gallery page.
Staff upload an image, optionally add a caption, assign an approved category and set publish status.
Category selection keeps gallery content organised for visitors and internal maintenance.
Publish control ensures only approved visuals are publicly visible.
The feature supports marketing credibility while remaining within the signed image-management scope.

#	Field name	Type	Required?	Meaning
1	Image	File upload	Yes	Photo shown in the Gallery page
2	Caption	Text	No	Optional caption / title
3	Category	Dropdown	Yes	Installation photos, Completed projects, Service work, or Product images
4	Publish / Unpublish	Status	Yes	Published = visible on Gallery page

9. Exact Admin Form Fields (continued)

9.4 Enquiry Management — fields and actions

Meaning: What staff see for each enquiry submitted from the website form.

Explanation

Enquiry Management is the operational workspace for leads submitted through the public enquiry form.
Staff can review the original customer-submitted details as read-only data to preserve request integrity.
Status updates track progress from New through Contacted, In Progress, Completed and Closed.
Search and filter capabilities help teams locate and prioritise enquiries efficiently.
Delete is available for authorised cleanup while the core follow-up workflow remains status-driven.

#	Field / Action	Type	Meaning
1	Name	Read-only	From the public enquiry form
2	Mobile Number	Read-only	From the public enquiry form
3	Email	Read-only	From the public enquiry form (if given)
4	Service Required	Read-only	From the public enquiry form
5	Product Interested In	Read-only	From the public enquiry form (if given)
6	Location	Read-only	From the public enquiry form
7	Message	Read-only	From the public enquiry form (if given)
8	Status	Dropdown	New, Contacted, In Progress, Completed, Closed
9	Search / Filter	Action	Find enquiries in the list
10	Delete	Action	Remove an enquiry

9.5 Contact Management — fields

Meaning: Contact values edited here appear on the public website header, footer and Contact Us page.

Explanation

Contact Management maintains the business contact information displayed across the public website.
Phone, WhatsApp, email, address, working hours and map details are required so visitors always see accurate reachability data.
Optional social URLs control which social icons appear; empty values hide the corresponding icon.
Updates made here synchronise header, footer, Contact page and WhatsApp actions.
This centralised control prevents inconsistent contact details across pages.

#	Field name	Type	Required?	Where it appears on the website
1	Phone	Phone	Yes	Header, footer, Contact Us; on mobile, Call opens the dial screen with this number
2	WhatsApp	Phone	Yes	Floating WhatsApp button and WhatsApp buttons
3	Email	Email	Yes	Public display and enquiry notification email
4	Address	Text area	Yes	Footer and Contact Us
5	Working hours	Text	Yes	Footer and Contact Us
6	Google Maps link	URL / embed	Yes	Contact Us map
7	Facebook URL	URL	No	Social icon (hidden if empty)
8	Instagram URL	URL	No	Social icon (hidden if empty)
9	Twitter URL	URL	No	Social icon (hidden if empty)
10	YouTube URL	URL	No	Social icon (hidden if empty)

10. Assumptions, Change Control & Acceptance

10.1 Assumptions

Explanation

Assumptions document the preconditions under which the signed scope remains valid.
The Client is expected to provide brand assets, product content, gallery images and contact information before content freeze.
The solution is planned as an enquiry website without commerce requirements.
Admin operations assume the three agreed roles only.
Enquiry email notification depends on the Client providing the business mailbox to receive leads.

#	Assumption	Meaning
1	Client content will be provided	Logo, product details, gallery images, contact details and social URLs before content freeze
2	Enquiry-only website	No online shopping or payment is required
3	Three admin roles only	Super Admin, Admin and Content Manager as listed in Section 8.3
4	Business email will be provided	Used for enquiry notification emails

10.2 Change Control

1. If a request is clearly listed under Included / page sections / field tables, it is part of delivery.
2. If a request is listed under Not Included, or is not written anywhere in this document, it is outside the signed project.
3. Outside items need a written Change Request (what to add, timeline impact, and any extra cost).
4. Verbal requests do not expand scope until a Change Request is approved in writing.

Delivery complete when: all Included items and all page/field tables in this document are built and accepted in testing. Not Included items remain excluded unless a Change Request is approved.

I / We confirm that this document correctly describes the pages, sections and fields included for the **Comfort Aircon** website and admin panel. Anything not listed here is not part of the current signed delivery unless a Change Request is approved in writing.
